# 33. Information and Communication Technology (ICT)

ICT is an umbrella term that includes any communication device or application, encompassing radio, television, cellular phones, computer and network hardware and software, satellite systems and so on, as well as the various services and applications associated with them, such as videoconferencing and distance learning.

ICT often finds application in education, health care, library and many other fields contexts.

#### GENERAL ABBREVIATIONS RELATED TO ICT

ASCII	American Standard Code for
	Information Interchange
Al	Artificial Intelligence
ALU	Arithmetic and Logic Unit
ALGOL	Algorithmic Language
ASCII	American Standard Code for
	Information Interchange
ATX	Advanced Technology Extended
BASIC	Beginner All Purpose Symbolic
	Instruction Code
BCC	Blind Carbon Copy
BIOS	Basic Input and Output System
BINAC	Binary Automatic Computer
CAN	Campus Area Network

CAD	Computer Aid Design
CC	Carbon Copy (on emails)
CCNP	Cisco Certified Network Professionals
CD	Compact Disk
CDROM	Compact Disc Read Only Memory
CEH	Certified Ethical Hacking
CISCO	Computer Information System
	Company
CMD	Command
COBOL	Common Basic Oriented Language
CSS	Cascading Style Sheet
CPU	Central Processing Unit
CMOS	Complimentary Metaoxide Semi-
	Conductor
CCNA	Cisco Certified Network Associate
DBA	Database Admin
DBMS	Database Management System

DDOS	Distribution Denial Of Service
DIMMs	Dual In-line Memory Module
DOC	Document
DNS	Domain Name System
DVD	Digital Versatile Disc
EBCDIC	Extended Binary Coded Decimal Interchange
	Code
EDSAC	Electronic Dialog Storage Automatic Computer
e-Commerce	Electronic Commerce

EEPROM/EAP	Electrical Erasable/Alterable Programmable Read	
ROM	Only Memory	
ENI <mark>AC</mark>	Electronic Number Integrator and Calculator	
EPR <mark>OM</mark>	Erasable Programmable Read only Memory	
EXE	Executable	
FAX	Far Away Xerox	
FORTRAN	Formular Translator	
FS	File System	
FTP	File Transfer Protocols	
GB	Gigabyte	
GIF	Graphics Interchange Format	
GSM	Global System for Mobile Communication	
GIGO	Gabbage In Gabbage Out	
GUI	Graphic User Interface	
HTML	Hypertext Markup Language	
HTTP	Hypertext Transfer Protocol	
HDD	Hard Disk Drive	
GHZ	Gigahertz	
ICT	Information Communication Technology	
IC	Integrated Circuit	
IP	Internet Protocol	
IDE	Integrated Drive Electronics	
ISP	Internet Service Provider	
IMAP	Internet Message Access Protocol	
JPEG	Joint Photographic Experts Group	
КВ	Kilobyte	
LED	Light Emitting Diode	

LAN	Local Area Network
LSIC	Large Scale Integrated Circuit
MAC	Media Access Control
MAN	Metropolitan Area Network
MB	Megabyte
MMS	Multimedia Message Service
MH <mark>Z</mark>	Megahertz
MOS	Metaoxide Semi Conductor
MPEG	Moving Picture Experts Group
MIPS	Million Instructions Per Second
MICR	Magnetic Ink Character Read
NOS	Network Operating System
OS	Operating System
PAN	Personal Area Network
PC	Personal Computer
PCI	Peripheral Component Interconnect
PROM	Programmable Read Only Memory
PDA	Personal Digital Assistant
PDF	Portable Document Format
PDT	Parallel Data Transm <mark>ission</mark>
PHP	PHP Hypertext Preprocessor
PPP	Point to Point Protocols
PING	Packet Internet Gopher
RAM	Random Access Memory
RDBMS	Relational Data Base Management System
RAM	Random Access Memory
RW	Re-Writeable

ROM	Read Only Memory
RIP	Routing Information Protocol
RFI	Remote File Inclusion
SDT	Serial Data Transmission
SEO	Search Engine Optimization
SIM	Subscriber Identification Module
SIMMs	Single In-line Memory Module
SQL	Structured Query Language
SRAM	Static Random Access Memory
SMTP	Simple Mail Transfer Protocol
ТВ	Terabytes
TCP	Transmission Control Protocol
TCPIP	Transmission Control Protocol Internet Protocol
UNIVAC	Universal Automatic Computer
USSD	Unstructured Supplementary Service Data
URL	Uniform Resource Locator
URI	Uniform Resource Identifier
USB	Universal Serial Bus
VDU	Visual Display Unit
VGA	Visual Graphic Adaptor/ Video Graphics Array
VPN	Virtual Private Network
WAN	Wide Area Network
Wifi	Wireless Fidelity
WPA	Wi-Fi Protected Access
WORM	Write Once Read Many
WLAN	Wireless Local Area Network
WWW	World Wide Web

XML	Extensible Mark-up Language
XXS	Cross Site Scripting
ZB	Zettabyte

## TERMINOLOGY RELATED TO ICT

CMS	'Content Management System' is the
	collection of procedures used to manage work
	flow in a collaborative environment.
	• In a CMS, data can be defined as nearly
	anything: documents, movies, pictures, phone
	numbers, scientific data, and so forth.
	<ul> <li>CMSs are frequently used for storing,</li> </ul>
	controlling, revising, semantically enriching,
	and publishing documentation.
	<ul> <li>Serving as a central repository, the CMS</li> </ul>
	increases the version level of new updates to
	an already existing file.
	<ul> <li>Version control is one of the primary</li> </ul>
	advantages of a CMS
Cookie	<ul> <li>A small piece of information you may be</li> </ul>
	asked to accept when connecting to certain
	servers via a web browser.
	• It is used throughout your session as a means
	of identifying you.
	<ul> <li>A cookie is specific to, and sent only to the</li> </ul>
	server that generated it.

Cyb	erspace	A term describing the world of computers
		and the society that uses them
Dat	a <mark> as a</mark>	<ul> <li>Data as a Service (DaaS) is defined as any</li> </ul>
Serv	vice (DaaS)	service offered wherein users can access
		vendor provided databases or host their own
		databases on vendor managed systems.
		DaaS is expected to grow significantly in the
		near future due to a few dominant themes
		including cloud-based infrastructure/services,
		enterprise data syndication, and the consumer
		services trend towards everything as a Service
		(XaaS).
		<ul> <li>In addition, vendor managed systems provide</li> </ul>
		necessary scalability and security for
		sustainable services execution.
		The DaaS market is expected to continue to
		expand alongside the Cloud Computing services
		model over the next decade. Telecom Data as a
		Service (TDaaS) is one of those new models in
		which CSPs offer DaaS to various third-party
		businesses on an anonymized basis.
		IoT Data as a Service (IoTDaaS) offers
		convenient and cost effective solutions to
		enterprises of various sizes and domain.
		IoT DaaS constitutes retrieving, storing and
		analyzing information and provide customer
		either of the three or integrated service

	package depending on the budget and the
	requirement.
Database	A collection of information organized so that
	a computer application can quickly access
	selected information; it can be thought of as an
	electronic filing system. Traditional databases
	are organized by fields, records (a complete set
	of fields), and files (a collection of records).
	<ul> <li>Alternatively, in a Hypertext database, any</li> </ul>
	object (e.g., text, a picture, or a film) can be
	linked to any other object.
Data center	A data center is a facility used to house
	computer systems and associated components,
	such as telecommunications and storage
	systems.
	It generally includes redundant or backup
	power supplies, redundant data
	communications connections, environmental
	controls (e.g., air conditioning, fire suppression)
	and security devices.
Data	Managing ICT data takes many shapes and
Management	forms. Specialized technologies, tools, and
	techniques (referred to collectively as Big Data
	Analytics) are utilized to deal with unstructured
	data (e.g. data that is non-correlated and/or of
	sufficient size and scope to be unwieldy to
	manage with conventional data management
	tools).

	<ul> <li>Leveraging analytics tools to derive value and</li> </ul>
	the integration between cloud, IoT, and
	enterprise operational technology are key
	focus areas for large companies across virtually
	every industry vertical.
	<ul> <li>This is important for many industry verticals</li> </ul>
	and market segments.
	<ul> <li>For example, Smart Cities will rely upon IoT</li> </ul>
	data management and analytics to provide
	control, automation, and enable better
	decision making.
Decompress	<ul> <li>Opposite of compressing a file; the process of</li> </ul>
	restoring the file to its original size and format.
	• The most common programs for
	decompressing files are Winrar for PC and
	compatible computers (.zip files) and Stuffit
	Expander (.sit files) for Macintosh computers.
Defragmentatio	<ul> <li>The process of rewriting parts of a file to</li> </ul>
n •	contiguous sectors on a hard drive to increase
	the speed of access and retrieval
DHCP	<ul> <li>Dynamic Host Configuration Protocol; a</li> </ul>
	protocol that lets a server on a local network
	assign temporary IP addresses to a computer or
	other network devices.
DIMM	<ul> <li>Dual In-line Memory Module; a small circuit</li> </ul>
	board that can hold a group of memory chips.
	<ul> <li>A DIMM is capable of transferring 64 bits</li> </ul>
	instead of the 32 bits each SIMM can handle.

5.51	
DPI	<ul> <li>Dots per inch; a measure of a printer's</li> </ul>
	resolution. The higher the number, the better
	the print quality.
	• A minimum of 300 dpi usually is required for
	professional quality printing.
Edge	There is an evolution underway in which edge
Computing	computing is gaining prominence in ICT
	networks.
	Decentralized or distributed (e.g. Fog) cloud
	computing will become increasingly important
	as various wireless and Internet of Things (IoT)
	related applications require massive computing
	at the edge of networks.
	Mobile cellular operators are making plans
	for Mobile Edge Computing (MEC), which
	enables cloud computing capabilities and an IT
	service environment at the edge of the cellular
	network.
	MEC will enable many new and enhanced
	applications and services including
	improvements in Augmented Reality, Location-
	based Services, Enterprise-specific Context
	Aware Services, Realtime Data as a Service
ECA	(DaaS), and more.
EGA	• Extended Graphics Adapter; a card (or board)
	usually found in older PCs that enables the
	monitor to display 640 pixels horizontally and
	350 vertically.

Emulation	Refers to the ability of a program or device to
	imitate another program or device;
	communications software often include
	terminal emulation drivers to enable you to log
	on to a mainframe.
	There also are programs that enable a Mac to
En on untion	function as a PC.
Encryption	The manipulation of data to prevent accurate
	interpretation by all but those for whom the
	data is intended.
Ethernet	<ul> <li>A popular network technology that enables</li> </ul>
	data to travel at 10 megabits per second.
	Campus microcomputers connected to a
	network have Ethernet cards installed that are
	attached to Ethernet cabling.
	<ul> <li>An Ethernet connection is often referred to</li> </ul>
	as a "direct connection" and is capable of
	providing data transmission speeds over 500
	Kbps.
Extension	• A suffix proceeded by a period at the end of a
	filename; used to describe the file type.
	Example: On a Windows computer, the
	extension ".exe" represents an executable file.
File	A collection of data that has a name (called
	the filename).
	<ul> <li>Almost all information on a computer is</li> </ul>
	stored in some type of file. Examples: data file
	(contains data such as a group of records);
	· · · · · · · · · · · · · · · · · · ·

	executable file (contains a program or
	commands that are executable); text file
	(contains data that can be read using a
	standard text editor).
Firewall	<ul> <li>A method of preventing unauthorized access</li> </ul>
	to or from a particular network; firewalls can
	be implemented in both hardware and
	software, or both.
Fre <mark>eware</mark>	Copyrighted software available for
	downloading without charge; unlimited
	personal usage is permitted, but you cannot do
	anything else without express permission of
	the author.
	<ul> <li>Contrast to shareware; copyrighted software</li> </ul>
	which requires you to register and pay a small
	fee to the author if you decide to continue
	using a program you download.
Fragmentation	<ul> <li>The scattering of parts of the same disk file</li> </ul>
	over different areas of a disk; fragmentation
	occurs as files are deleted and new ones are
	added.
FTP	File Transfer Protocol; a method of
	exchanging files between computers via the
	Internet. A program like WS_FTP for IBM PC or
	compatibles or Fetch for Macintosh is required.
	Files can contain documents or programs and
	can be ASCII text or binary data.

GIF	<ul> <li>Graphics Interchange Format; a format for a</li> </ul>
	file that contains a graphic or a picture.
	<ul> <li>Files of this type usually have the suffix ".gif"</li> </ul>
	as part of their name. Many images seen on
	web pages are GIF files.
GPS	<ul> <li>Global Positioning System; a collection of</li> </ul>
	Earth-orbiting satellites.
	<ul> <li>In a more common context, GPS actually</li> </ul>
	refers to a GPS receiver which uses a
	mathematical principle called "trilateration"
	that can tell you exactly where you are on
	Earth at any moment.
Gre <mark>yware</mark>	<ul> <li>Greyware (or grayware) refers to a malicious</li> </ul>
	software or code that is considered to fall in
	the "grey area" between normal software and
	a virus.
	<ul> <li>Greyware is a term for which all other</li> </ul>
	malicious or annoying software such as
	adware, spyware, trackware, and other
	malicious code and malicious shareware fall
	under.
GUI	Graphical user interface; a mouse-based
	system that contains icons, drop-down menus,
	and windows where you point and click to
	indicate what you want to do.
Haptic Internet	<ul> <li>Most people are familiar with Haptic</li> </ul>
	technology by way of the kinesthetic user
	interface for smart phones or other consumer

	electronics that recreates a sense of touch by
	applying forces, vibrations, or motions to the
	user.
	Conversely, haptic devices may incorporate
	tactile sensors that measure forces exerted by
	the user on the interface.
	• Tactile Internet will be based on haptic sense/
	touch that will connect humans with unknown
	environments.
	Haptic sense establishes bilateral
	communication patterns as touch imposes
	sensed motion on environment that enables
	environment to create a distortion or reaction
	and feel.
High-Definition	Short for High-Definition Multimedia
Multimedia	Interface, it is the first industry-supported
Interface	uncompressed, all digital audio/video
(HDMI)	proprietary interface.
	• It is a single cable and user-friendly connector
	that replaces the maze of cabling behind the
	home entertainment centre.
	An HDMI cable provides an interface
	between any audio/video source, such as a set-
	top box, DVD player, or A/V receiver and an
	audio and/or video monitor, such as a digital
	television (DTV), over a single cable. HDMI
	supports standard, enhanced, or high-

	definition video, plus multi-channel digital
	audio on a single cable.
Heterogeneous	Wireless networks need to handle an ever
Networks	increasing number of devices, consuming high
(HetNet)	volumes of data, both indoors and outdoors,
	and in a very unpredictable pattern with
	seamless coverage and consistent capacity.
	<ul> <li>A Heterogeneous Network (HetNet) is</li> </ul>
	comprised of a combination of cellular Macro
	Cells, Small Cells, Carrier WiFi and supporting
	technologies to meet the coverage and usage
	demands of both humans and machines
	(associated with IoT apps and services).
	<ul> <li>In a HetNet environment, the Macro Cell</li> </ul>
	provides a larger umbrella coverage area while
	Small Cells are placed in strategically closer
	locations to the UE to provide required
	coverage and capacity.
	HetNets are critical infrastructure for the
	success of LTE and for the development of
	future 5G based networks.
HTML	HyperText Markup Language; a language
	used for creating web pages. Various
	instructions and sets of tags are used to define
11 11 1	how the document will look.
Hyperlink	• Connects one piece of information (anchor)
	to a related piece of information (anchor) in an
	electronic document. Clicking on a hyperlink

takes you to directly to the linked destination which can be within the same document or in an entirely document will look.  Hypertext  • Data that contains one or more links to other data; commonly seen in web pages and in online help files. • Key words usually are underlined or highlighted. • In a hypertext file, you click on a link to go directly to the related information  IMAP  • Internet Message Access Protcol. A method of accessing e-mail messages on a server without downloading them to your local hard drive; it is the main difference between IMAP and POP3 which requires messages to be downloaded to a user's hard drive before the message can be read.  Industrial  Internet of Things (IIoT) is sometimes used in Things  the context of next generation manufacturing, but it may also be referenced in a more general sense to pertain to the broader enterprise market, which includes many different industry verticals such as IoT in Agriculture. • In both cases, IIoT benefits will extend beyond initial cost savings and process improvements to identification of entirely new

	business models and service offerings as
	traditional products transform to services.
Intelligent	The term Intelligent Network is typically
Network (IN)	reserved for reference to telecommunication
	standards and technologies associated with
	centralized control application control and
	services management.
	IN standards in cellular networks include
	Customized Applications for Mobile Enhanced
	Logic (CAMEL) for GSM networks and Wireless
	Intelligent Network (WIN) for ANSI networks.
Inte <mark>rnet of</mark>	• The Internet of Things (IoT) refers to uniquely
Things	identifiable objects (things) and their virtual
	representations in an Internet-like structure.
	<ul> <li>Stated differently, the concept involves the</li> </ul>
	notion that there are many things (assets,
	objects, etc.) in the world that may be
	addressed/labeled/cataloged for various
	purposes.
IP Multimedia	• The IP Multimedia Subsystem (IMS) is an
Subsystem	architecture for delivering Internet Protocol
(IMS)	(IP) based multimedia services with quality of
	service over multiple access networks from a
	common core.
	• It was initiated in mobile standards body 3rd
	Generation Partnership Project (3GPP), as a
	part of the vision for evolving mobile networks.
	The original vision was the delivery of

	internet services over GPRS (General Packet
	Radio System).
	<ul> <li>That vision was subsequently updated by</li> </ul>
	3GPP, 3GPP2, Cable Labs and TISPAN
	(Telecommunications and Internet Services and
	Protocols for Advanced Networks) to support
	multiple access networks.
JPEG	• Joint Photographic Experts Group; a graphics
	format which compresses an image to save
	space.
	<ul> <li>Most images imbedded in web pages are</li> </ul>
	GIFs, but sometimes the JPEG format is used
	(especially for detailed graphics or
	photographs).
	<ul> <li>In some cases, you can click on the image to</li> </ul>
	display a larger version with better resolution.
Kbps	<ul> <li>Kilobits per second; a measure of data</li> </ul>
	transfer speed; one Kbps is 1,000 bits per
	second. Example: a 28.8 Kbps modem.
Kerning	• The amount of space between characters in a
	word; in desktop publishing, it is typically
	performed on pairs of letters or on a short
	range of text to fine-tune the character
	spacing.
Learning	<ul> <li>Software used for developing, using, and</li> </ul>
management	storing course content of all types. Information
system (LMS)	within a learning management system often
	takes the form of learning objects.

A program that manages electronic mailing lists; OIT is responsible for the List Processor software and also handles requests from the OSU community or new mailing lists.  Machine     An application of Artificial Intelligence that gives machines the ability to learn and improve without the help of humans or new programming.  MAC     Media Access Control; The hardware address of a device connected to a shared network  Mainframe     A very large computer capable of supporting hundreds of users running a variety of different programs simultaneously.     Often the distinction between small mainframes and minicomputers is vague and may depend on how the machine is marketed.  Malware     Software programs designed to damage or do other unwanted actions on a computer; common examples of malware include viruses, worms, trojan horses, and spyware.  MAPI     Messaging Application Programming     Interface; a system built into Microsoft     Windows that enables different e-mail programs to interface to distribute e-mail.     When both programs are MAPI-enabled, they can share messages.  MDM     Mobile Device Management; Any routine or tool intended to distribute applications, data,		
software and also handles requests from the OSU community or new mailing lists. can share messages.  MDM • Mobile Device Management; Any routine or		programs to interface to distribute e-mail.
MDM • Mobile Device Management; Any routine or		<ul> <li>When both programs are MAPI-enabled, they</li> </ul>
		can share messages.
tool intended to distribute applications, data,	MDM	
		tool intended to distribute applications, data,

	and configuration settings to mobile
	communications devices.
	The intent of MDM is to optimize the
	functionality and security of a mobile
	communications network. MDM must be part
	of a coherent BYOD strategy
MIME	Multipurpose Internet Mail Extensions; a
	protocol that enables you to include various
	types of files (text, audio, video, images, etc.)
	as an attachment to an e-mail message
MPEG	<ul> <li>Motion Picture Experts Group; a high quality</li> </ul>
	video format commonly used for files found on
	the Internet. Usually a special helper
	application is required to view MPEG files.
MRB	<ul> <li>Managed Remote Back Up; a service that</li> </ul>
	provides users with a system for the backup,
	storage, and recovery of data using cloud
	computing.
MSP	<ul> <li>Managed Service Provider; A business model</li> </ul>
	for providing information-technology services
Multimedia	<ul> <li>The delivery of information, usually to a</li> </ul>
	personal computer, in a combination of
	different formats including text, graphics,
	animation, audio, and video.
Multitasking	<ul> <li>The ability of a CPU to perform more than</li> </ul>
	one operation at the same time; Windows and
	Macintosh computers are multitasking in that
	each program that is running uses the CPU only

for as long as needed and then control switches
to the next task.
<ul> <li>Network as a Service; a category of cloud</li> </ul>
services that provides users with the capability
of where the capability provided to the cloud
service user is to using network/transport
connectivity services and/or inter-cloud
network connectivity services.
Network Address Translation; a standard that
enables a LAN to use a set of IP addresses for
internal traffic and a single IP address for
communications with the Internet.
Network News Transport Protocol; the
protocol used for posting, distributing, and
retrieving network news messages.
Dataprise Cloud-based Network Monitoring
service, can configure and remotely monitor all
of your important network systems (e-mail,
servers, routers, available disk space, backup
applications, critical virus detection, and more).
<ul> <li>If our system detects a problem, it alerts the</li> </ul>
Dataprise Technical Support Center, so we can
take corrective action.
Depending on prearranged instructions from
your own network engineers, we'll correct the
problem immediately, wait until the next
business day or simply notify you of the issue.

Network	<ul> <li>Network security consists of the provisions</li> </ul>
security	and policies adopted by a network
	administrator to prevent and monitor
	unauthorized access, misuse, modification, or
	denial of the computer network and network
	accessible resources.
	<ul> <li>Network Security is the authorization of</li> </ul>
	access to data in a network, which is controlled
	by a network administrator.
	<ul> <li>Dataprise uses state-of-the-art network</li> </ul>
	security techniques while providing authorized
	personnel access to important files and
	applications.
	<ul> <li>Every organization's needs are different and</li> </ul>
	hackers are always adapting their techniques,
	so we are extremely serious about staying up
	to date with the latest network security tools,
	threats and industry developments
OCR	<ul> <li>Optical character recognition; the act of using</li> </ul>
	a visual scanning device to read text from hard
	copy and translate it into a format a computer
	can access (e.g., an ASCII file).
	OCR systems include an optical scanner for
	reading text and sophisticated software for
	analyzing images.
PaaS	<ul> <li>Platform as a Service, in the PaaS model,</li> </ul>
	cloud providers deliver a computing platform
	that typically including an operating system,

programming language evention environment	
programming language execution environment,	
database, and web server.	
The range of colors a computer or an	
application is able to display. Most new	
computers can display as many as 16 million	
colors, but a given program may use only 256	
of them.	
<ul> <li>Also refers to a display box containing a set of</li> </ul>	
related tools within a desktop publishing or	
graphics design program.	
<ul> <li>A form of switching in which data is</li> </ul>	
transmitted as packets of information that are	
"bursty" in nature a usually transmitted over	
diverse routes.	
<ul> <li>A type of connection between two</li> </ul>	
computers; both perform computations, store	
data, and make requests from each other	
(unlike a client-server connection where one	
computer makes a request and the other	
computer responds with information).	
<ul> <li>A con that scammers use to electronically</li> </ul>	
collect personal information from unsuspecting	
users.	
<ul> <li>Phishers send e-mails that appear to come</li> </ul>	
from legitimate websites such as eBay, PayPal,	
or other banking institutions asking you to click	
on a link included in the email and then update	
or validate your information by entering your	

	username and password and often even more
	information, such as your full name, address,
	phone number, social security number, and
	credit card number
PING	<ul> <li>Packet Internet Groper; a utility used to</li> </ul>
	determine whether a particular computer is
	currently connected to the Internet.
	<ul> <li>It works by sending a packet to the specified</li> </ul>
	IP address and waiting for a reply.
Pixel	• Stands for one picture element (one dot on a
	computer monitor); commonly used as a unit
	of measurement.
plug-in	<ul> <li>A program used for viewing multimedia files</li> </ul>
	that your web browser cannot handle
	internally; files using a plug-in do not need to
	be moved to your computer before being
	shown or played.
	<ul> <li>Contrast to a helper application which</li> </ul>
	requires the file to first be moved to your
	computer. Exampl <mark>es of plugins</mark> : Adobe Flash
	Player (for video and animation) and Quicktime
	(for streamed files over the Internet).
Plug and play	• A set of specifications that allows a computer
	to automatically detect and configure a device
	and install the appropriate device drivers
POP	<ul> <li>Post Office Protocol; a method of handling</li> </ul>
	incoming electronic mail. Example: E-mail
	programs may use this protocol for storing your

incoming massages on a special eluctor of
incoming messages on a special cluster of
servers called pop. service.
<ul> <li>A page description language primarily used</li> </ul>
for printing documents on laser printers; it is
the standard for desktop publishing because it
takes advantage of high resolution output
devices. Example: A graphic design saved in
PostScript format looks much better when
printed on a 600 dpi printer than on a 300 dpi
printer.
Refers to a special kind of server that
functions as an intermediate link between a
client application (like a web browser) and a
real server.
<ul> <li>The proxy server intercepts requests for</li> </ul>
information from the real server and whenever
possible, fills the request.
<ul> <li>When it is unable to do so, the request is</li> </ul>
forwarded to the real server.
<ul> <li>Any non-copyrighted program; this software</li> </ul>
is free and can be used without restriction.
Often confused with "freeware" (free software
that is copyrighted by the author).
<ul> <li>Often used to refer to the most basic legacy</li> </ul>
features, such as "dial tone" and the ability to
simply initiate and receive calls, POTS is
occasionally used to conversely refer to
telecommunications services that do not rely

	upon advanced features or technologies such	
	as use of Internet Protocols or next generation	
	ICT infrastructure.	
Programmable	The term Programmable Telecom (or	
Telecom	Programmable Telecoms) is an important one	
	as it pertains to the general notion of	
	leveraging telecommunications capabilities by	
	way of Telecom APIs as well as other tools	
	including SDKs, GUIs, open source platforms,	
	and other methods	
Pub <mark>lic Switched</mark>	<ul> <li>Generally referred to as the core</li> </ul>	
Telecommunica	telecommunications network relied upon for	
tions Network	local wireline communications as well as	
(PSTN)	transport of long distance calls and other	
	traditional services.	
	<ul> <li>In contrast, cellular systems are typically not</li> </ul>	
	considered part of the PSTN, but rather	
	interconnect with it so that wire line callers can	
	reach wireless users and vice versa.	
	<ul> <li>Likewise, next generation packet-based</li> </ul>	
	networks that utilize Internet Protocol based	
	signaling and data transfer are also not	
	considered part of the PSTN.	
RTF	Rich Text Format; a type of document	
	formatting that enables special characteristics	
	like fonts and margins to be included within an	
	ASCII file.	

May be used when a document must be	
shared among users with different kinds of	
computers (e.g., IBM PC or compatibles and	
Macintoshes).	
<ul> <li>A storage area network (SAN) is a dedicated</li> </ul>	
storage network that provides access to	
consolidated, block level storage.	
<ul> <li>SANs primarily are used to make storage</li> </ul>	
devices (such as disk arrays, tape libraries, and	
optical jukeboxes) accessible to servers so that	
the devices appear as locally attached to the	
operating system.	
<ul> <li>A SAN typically has its own network of</li> </ul>	
storage devices that are generally not	
accessible through the regular network by	
regular devices.	
<ul> <li>In a graphical user interface system, the</li> </ul>	
narrow rectangular bar at the far right of	
windows or dialog boxes.	
<ul> <li>Clicking on the up or down arrow enables you</li> </ul>	
to move up and down through a document; a	
movable square indicates your location in the	
document.	
<ul> <li>Certain applications also feature a scroll bar</li> </ul>	
along the bottom of a window that can be used	
to move from side-to-side.	

Self-organizing	<ul> <li>The concept of Self organizing networks</li> </ul>	
Networks	(SON) has picked up only after the transition	
(SON)	from 3G to 4G started. This was because of the	
	exponential increase in the data traffic which	
	required a change in the way the network	
	coverage and capacity were planned.	
	<ul> <li>Huge volumes of data traffic clogged up the</li> </ul>	
	network while not leading to proportional	
	increase in the revenue.	
	<ul> <li>Self-organizing Networks (SON) provide</li> </ul>	
	automation solution for planning,	
	configuration, management, optimization, and	
	healing of mobile RAN functions that emerged	
	out from 4G LTE environment and IMS	
	technology.	
	<ul> <li>SON provides efficient, and in some cases,</li> </ul>	
	programmatic means of fine tuning cellular	
	networks.	
	<ul> <li>SON systems are part of next generation</li> </ul>	
	OSS/BSS technologies for mobile network	
	operators to automate previously manual	
	network optimization procedures.	
Self-extracting	A type of compressed file that you can	
file:	execute (e.g., double-click on the filename) to	
	begin the decompression process; no other	
	decompression utility is required. Example: on	

IBM PC or compatibles, certain files with an

	".exe" extension and on Macintoshes, all files
	with a ".sea" extension.
Session	<ul> <li>Designed in 1996 and specified by</li> </ul>
Initi <mark>ation</mark>	International Engineering Task Force (IETF),
Protocol (SIP)	Session Initiation Protocol (SIP) is a signaling
	protocol used for a variety of purposes in IP
	networks.
	• SIP is principally a mechanism employed to
	seamlessly create, modify and terminate
	sessions involving multiple participants.
	• Such sessions could be Internet telephone
	calls, multimedia conferences or multicast
	sessions.
	• SIP can work with any type of media content.
	• SIP is independent of the transport layer and
	can therefore be used with multiple transport
	protocols.
Spam	• Email spam, also known as junk email or
	unsolicited bulk email (UBE), is a subset of
	spam that involves nearly identical messages
	sent to numerous recipients by email.
	Definitions of spam usually include the aspects
	that email is unsolicited and sent in bulk.
	Spammers collect email addresses from
	chatrooms, websites, customer lists,
	newsgroups, and viruses which harvest users'
	address books, and are sold to other
	spammers. They also use a practice known as

	"email appending" or "epending" in which they
	use known information about their target (such
	as a postal address) to search for the target's
	email address
Streaming	<ul> <li>A technique for transferring data over the</li> </ul>
(str <mark>eaming</mark>	Internet so that a client browser or plug-in can
med <mark>ia)</mark>	start displaying it before the entire file has
	been received; used in conjunction with sound
	and pictures. Example: The Flash Player plug-in
	from Adobe Systems gives your computer the
	capability for streaming audio; RealPlayer is
	used for viewing sound and video.
Spyware	<ul> <li>Any software that covertly gathers user</li> </ul>
	information, usually for advertising purposes,
	through the user's Internet connection.
Telnet	<ul> <li>A generic term that refers to the process of</li> </ul>
	opening a remote interactive login session
	regardless of the type of computer you're
	connecting to.
Turing Test	<ul> <li>In the 1950s Alan Turing created the Turing</li> </ul>
	Test which is used to determine the level of
	intelligence of a computer.
TIFF	Tag Image File Format; a popular file format
	for storing bit-mapped graphic images on
	desktop computers.
	• The graphic can be any resolution and can be
	black and white, gray-scale, or color. Files of

	this type usually have the suffix ".tif" as part of
	their name.
Time Division	A form of data handling and signaling in
Multiplexing	which a common channel is used for
(TD <mark>M)</mark>	transmitting and receiving information.
	This in contrast to the use of Internet
	Protocol (IP) and other packet switching
	methods that do not require use of a dedicated
	path, but rather instead transmit information
	as packets of data, often over diverse paths to
	traverse from data sender to data receiver.
UNIX	A popular multitasking computer system
	often used as a server for electronic mail or for
	a web site.
	UNIX also is the leading operating system for
	workstations, although increasingly there is
	competition from Windows NT which offers
	many of the same features while running on PC
	or compatible computer.
Unstructured	• Typically defined as data that does not have a
Data	defined data model and not organized in a
	manner that is conducive to analysis via
	traditional tools, unstructured data is often
3	voluminous and difficult to manage with
	traditional data management technologies, tools, and techniques.
	<ul> <li>Accordingly, Big Data Analytics are often</li> </ul>
	utilized to derive actionable information from
	atinzed to derive detionable information from

	raw data, which may come from anything from	
	social media networks to sensors that capture	
	machine generated data from industrial	
	processes or machines such as a jet engine.	
URL	Uniform Resource Locator; a means of	
	identifying resources on the Internet. A full URL	
	consists of three parts: the protocol (e.g., FTP,	
	gopher, http, nntp, telnet); the server name	
	and address; and the item's path.	
	• The protocol describes the type of item and is	
	always followed by a colon (:). The server name	
	and address identifies the computer where the	
	information is stored and is preceded by two	
	slashes (//).	
	<ul> <li>The path shows where an item is stored on</li> </ul>	
	the server and what the file is called; each	
	segment of the location s preceded by a single	
	slash (/).	
Virtual Reality	Virtual Reality (VR) focuses on virtual	
	experience through realistic interaction with 3D	
	content presented in a digitally generated	
	space.	
	VR depends upon data from human sensory	
	organs such as stereoscopic Images, sound, and	
	biosignals to enhance the VR experience.	
Virus	<ul> <li>A program intended to alter data on a</li> </ul>	
	computer in an invisible fashion, usually for	
	mischievous or destructive purposes. Viruses	

	are often transferred across the Internet as
	well as by infected diskettes and can affect
	almost every type of computer. Special
	antivirus programs are used to detect and
	eliminate them.
VoIP	<ul> <li>Voice over Internet Protocol; a means of</li> </ul>
	using the Internet as the transmission medium
	for phone calls. An advantage is you do not
	incur any additional surcharges beyond the
	cost of your Internet access.
WAIS	<ul> <li>Wide Area Information Server; a program for</li> </ul>
	finding documents on the Internet. Usually
	found on gopher servers to enable searching
	text-based documents for a particular keyword.
Workstation	<ul> <li>A graphical user interface (GUI) computer</li> </ul>
	with computing power somewhere between a
	personal computer and a minicomputer
	(although sometimes the distinction is rather
	fuzzy). Workstations are useful for
	development and for applications that require
	a moderate amount of computing power and
	relatively high quality graphics capabilities.

### 34. Basic of Internet

The Internet is simply a series of computers, linked to one another around the world, communicating almost instantaneously with one another. It comprises tens and thousands of computer networks (a single network may link of all the computers of an office; A larger network may be connecting all the computers within a university premises) communicating with each other like a big net or web! It can be termed as a 'network of networks'. Computer networks are physically linked with one another through telephone, radio, cable lines, satellite, or even fiber optic.

#### TYPES OF COMPUTER NETWORK

Local Area Network	LAN connects two or more
(LAN):	communication devices (like computers
	and printers) over a relatively short
	distance.
	<ul> <li>LANs usually work within an office</li> </ul>
	premises, a factory or a campus where
	communication devices are connected
	through a cable, within a distance of 2000
	feet.
	<ul> <li>Most LAN networks shared medium</li> </ul>
	networks, where the workstations shares
	and waits for its turn to use a resource
	such as printer, plotter etc
Wireless Local Area	Wireless local area network provides
Network (WLAN)	LAN connectivity within a small geographic

Bluetooth Technology	area, normally within 150 meters and is typically used where cabling is either not possible or would be very cumbersome, for instance, you may wish to provide LAN connectivity in an open air restaurant.  Bluetooth technology is a wireless medium for sharing information across computers and other electronic devices like mobile phones, Personal Digital Assistants (PDAs)
Wide Area Network (WAN)	etc, using low power radio frequency.  • WAN networks span larger areas than a single building or a campus. They are long-haul networks covering wide geographical areas and often require multiple communication connections like leased lines, satellites, and microwave radio links to interconnect various LANs. LANs are usually measured in feet, while WANs are measured in miles
Metropolitan Area Networks (MAN)	<ul> <li>A group of LANs connected through a high-speed, seamless interconnection, within a 'metropolitan' area, is termed as a Metropolitan Area Network (MAN).</li> </ul>
	• The word 'metropolitan' does not necessarily mean a 'city' but can be any area that is spread out, but is treated as one entity, e.g. a company having its two

buildings on the opposite sides of the road.

 MAN connects users with computer resources in a geographic area that is larger than that covered by a LAN but smaller than the area covered by a WAN.

#### INTERNET CONNECTIVITY OPTIONS

There are various options available to connect to the Internet. The commonly used ones are explained below.

Dial- <mark>Up</mark>	• Dial-up provides, connecting a device to a	
	network using modem over the public	
	telephone network.	
	<ul> <li>Dial-up access is really just like a phone</li> </ul>	
	connection, except that instead of two	
	individuals on the two ends you have	
	computer devices.	
	<ul> <li>Since the dial-up uses the regular</li> </ul>	
	telephone lines, the quality of connection	
	is not always good.	
Integrated Services	<ul> <li>ISDN, as the name suggests, is a digital</li> </ul>	
Digital Network	communications line.	
(ISDN)	<ul> <li>It allows for transmission of data, voice,</li> </ul>	
	video, and graphics, at very high speeds,	
	over standard communication lines.	
	<ul> <li>ISDN lines can carry large amounts of</li> </ul>	
	data, while providing a single common	

_
nterface to access digital communication
ervices required for varying devices, while
eeping it transparent to the end user.
Owing to these features, ISDN
pplications have revolutionized the way
usinesses communicate.
ISDN is not restricted to public telephone
etworks, but can use packet switched
etworks, CATV networks, telex etc.
A DSL connection is a very high-speed
onnection that uses the same wires as a
egular telephone line.
Many local companies, in addition to
neir regular phone services, also provide
nternet services (DSLs). DSLs are,
nerefore, available in some (not all) areas
here regular phone services are available.
A DSL connection has a much higher
peed of conn <mark>ection, than a regular dial-up</mark>
onnection (5 <mark>6 kbps)</mark> and the connection
an be left open, while we use our phone
ne for voice calls.
The reliability and monthly rates for a DSL
onnection are comparable to that of the
able network service, but the connection
peed is slower.
An alternative way to connect two
omputers is through a leased line.

	• It is like a 'private circuit' between the
	two machines.
	<ul> <li>A leased line can best be understood, as a</li> </ul>
	permanent dedicated communication link
	between two points and is reserved,
	exclusively for the leased line purchaser.
	<ul> <li>A leased line can be a twisted pair, coax</li> </ul>
	cable, or (more recently) a fibre optic
	cable.
	<ul> <li>Leased lines have varying data transfer</li> </ul>
	rates, going up to a speed of 1.544 Mbps.
	<ul> <li>Using multiplexing techniques, these</li> </ul>
	transfer rates can be divided between
	voice and data.
	<ul> <li>Large companies having high Internet</li> </ul>
	usage, usually go in for leased lines since it
	is a more cost effective solution than the
	traditional one like ISDN.
Cable Internet	<ul> <li>Today, in addition to the traditional cable</li> </ul>
Services	services, most of the cable TV companies
	also provide Internet services.
	These services come at reasonable
	monthly rates, reliable and have high
	download transmission and upload rates.
Domain Naming Syste	om (DNC)

## Domain Naming System (DNS)

 In a network, computers and devices can be grouped together and can be administered as a unit with common rules and procedures, sharing a common name. Such a group is referred to as a Domain.

- Domain Naming System (or Service), commonly known as the DNS, is an Internet service that translates domain names to or from IP addresses, which is the actual basis of addressing on the Internet.
- The Domein suffix as the last three letters of the address, provides information about the kind of body to which the address belongs, e.g., .edu for educational .org for organizational, .com for commercial

#### **Communication Protocol**

When different computers, peripherals and devices are connected in a network they need to follow a set of standard rules for transmitting and receiving data to avoid data collision. These set of rules and conventions are called Protocols. Transmission Control Protocol (TCP) and Internet Protocol (IP) are two distinct network protocols. They are so commonly used together that TCP/IP has become a standard terminology to refer to either or both of the protocols.

### **INTRANET**

 Unlike the Internet where a page can be accessed globally, an intranet or internal website is a private network for a corporation or organization that only those with permission can access. A computer residing on an intranet is often using IP addresses in the reserved address space. That computer cannot be accessed outside of the local network unless given permission through the Internet.

• The intranet is essentially a small-scale version of the internet, operating with similar functionality, but existing solely within the firm. Like the internet, the intranet uses network technologies such as Transmission Control Protocol/ Internet Protocol (TCP/IP). It allows for the creation of internal networks with common internet applications that can allow them to communicate with different operating systems.

## Table of Comparison Intranet and the Internet:

Parameter	Internet		Intranet
Usage	Public		Private
User Types	Any use <mark>r hav</mark> ing o	lial <mark>up</mark>	Organization employees
	of internet access	line.	and internal company
			departments
Usage	Access all kind of		Internal employee
	<u>infor</u> mation		communication table
			directories etc.
Security	Low security. Configured		High security. Configured
	under 0 security level in		under 100 security level in
	firewall		firewall
Regulated	Internet Architect	ture	It is regulated by an
by	Board (IAB) : Oversees		organization
	the technical and		V
	engineering		
	development of t	he IETF	

	and IRTF. Inte	ernet		
	corporation f	or Assig	gned	
	Names and N	lumbers	5	
	(ICANN).			
Coverage	Wide Area			Within an organization
Access	Large numbe	r of use	rs	Limited number of users
System	Unpredictabl	e		System availability is high
failure				since system is monitored
				by authority

#### **EMAIL ADDRESS**

An e-mail address normally consists of three parts in a sequence going from the specific to the general:

- i. The ID of the User
- ii. The "@" Sign
- iii. The domain name given by the DNS (Domain Naming System).

Example: khurshid.editorial@aiets.co.in Here, khurshid.editorial is the user id and aiets.co.in is the domain name separated by @

#### **ANATOMY OF EMAIL MESSAGE**

Messages in an electronic mail consist of three major sections.

- i. The message header;
- ii. The message body; and
- iii. The attachment(s)

i. The Header: It contains control information, including, minimally, an originator's email address and one or more recipient addresses. Usually, additional information is added, such as a subject header field structured into fields like summary, sender, receiver, and other information about the e-mail. The message header generally includes at least the following fields:

#### From:

It includes the e-mail address and, optionally, the name of the sender who sends the email. The field is filled up automatically when a message is sent.

#### To:

Here the e-mail address/es and, optionally, name/s of the message's recipient/s is/are included. It indicates primary recipient, for secondary recipients Carbon copy (Cc) and Blind Carbon Copy (Bcc) is used to make the data individual to other recipient. The "To:" field is similar to the addressing at the top of a conventional letter which is delivered according to the address on the outer envelope. Many e-mail clients will mark e-mail in the inbox differently depending on whether the addresses are in the "To:" or "Cc:" list.

## **Subject:**

A brief summary of the message

### Date:

The local time and date when the message was written. Many email clients fill this in automatically when sending. The recipient's client may then display the time in the format and time zone local to her.

## Message-ID

Message-ID is a unique identifier for a digital message, most commonly a globally unique identifier used in email and Usenet newsgroups. It is also an automatically generated field used to prevent multiple deliveries and for reference in "In-ReplyTo". The "In-Reply-To" field is used to link related messages together.

## 2. The Body

The e-mail clients generally allow the use of either plain text or HTML for the message body at the option of the user. HTML e-mail messages often include an automatically-generated plain text copy as well, for reason of compatibility. The body sometimes contains a signature block at the end. This is exactly the same as the body of a regular letter. The header is separated from the body by a blank line.

#### 3. Attachments

The attachments are the files that are sent through the email. Many email systems do not allow the software or the file that contains "setup.exe" to be sent through email as attachments.

Some Email service providers

(1)	AIM Mail		(http://webmail.aol.
			com)
(2)	Gmail		(http://mail.google.c om)
(3)	MSN Hotmail / Wind	dows L <mark>ive</mark>	(http://mail.live.co
	Mail		m)
(4)	Rediffmail		(http://www.rediff.c
			om)
(5)	Yahoo! Mail		(https://login.yahoo.
			com)

#### **AUDIO CONFERENCING**

Audio conferencing is the use of voice communications equipments to establish an audio link between geographically dispersed per-sons, one that allows them to conduct a conference.

## **Merits and Demerits of Audio Technologies**

	Merits		Demerits
1.	Equipment required to	2.	Difficult to explain abstract
	setup audio conference is		concepts on audio
	simple and less expensive		conference due to lack of
			visual information.
2.	Options for selecting	2.	It is difficult to learn
	Telephone or speaker		through audio information
	phones and a telephone		only
	networks are many.		

3.	Audio conference can be	3.	Scheduling is necessary
	easily recorded by the		and coordination between
	students themselves for		teacher availability and
	reference.		student convenience is
			needed.
4.	Students can participate	4.	Since eye contact is not
	in the conference from		possible it is difficult to
	anywhere.		retain attention of
			students.

#### **VIDEO CONFERENCING**

Video conferencing is a line virtual connection between people in separate locations for the purpose of communication, usually involving audio and often text as well as video. At its simplest, videoconferencing provides transmission of static images and text between two locations. At its most sophisticated, it provides transmission of full-motion video images and high-quality audio between multiple locations.

## **Advantage / Disadvantages of Video Technologies**

Advantages	Disadvantages
They allow both audio and	Are expensive and the
video communications. Hence	infrastructure at each site may
are suitable for teaching that	be unaffordable for many
involves demonstrations.	institutions
Video medium supports visuals	Requires teachers trained to
related to lab experiments and	teach through this technology

abstract topics.	camera men and other
	technical experts. Effective
	programmes require rehearsals
	with teachers and technical
	team.
They encourage interactive	The programmes are
learning.	scheduled, and learners need
learning.	to be present at the time of

## 35. Digital Initiatives in Higher Education

Digital revolution is bringing in sweeping changes in the Higher Education landscape. Every institute is taking various initiatives in promoting digital education. The technology of online education and all the digital initiatives have the possibility to revolutionize higher education scenario in the near future.

Department of Higher Education, Ministry of Human Resource
Development is administering a programme 'National Mission on
Education through Information and Communication Technology'
(NMEICT) to leverage the potential of ICT to make the best quality
content accessible to all learners in the country, free of cost. The
various initiatives under this programme are as under:

## 1. SWAYAM -STUDY WEBS OF ACTIVE LEARNING FOR YOUNG ASPIRING MINDS

The 'Study Webs of Active Learning for Young Aspiring Minds' (SWAYAM) is an integrated platform for offering online courses covering school (9th to 12th) to Post Graduate Level. SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital

revolution and have not been able to join the mainstream of the knowledge economy.

#### 2. SWAYAM PRABHA: THE 32 EDUCATIONAL DTH CHANNELS

The SWAYAM PRABHA has been conceived as the project for telecasting high quality educational programmes through 32 DTH channels on 24×7 basis.

## 3. NATIONAL DIGITAL LIBRARY (NDL)

National Digital Library in India aims to collect, preserve and disseminate entire intellectual output of our country and provide online access from school level to post graduate level, including technical education.

## 4. NATIONAL ACADEMIC DEPOSITORY (NAD)

 National Academic Depository (NAD) facilitates digital issuance, storage, access and verification of Academic Awards issued by Academic Institutions.

#### 5. e-SHODH SINDHU

Based on the recommendation of an Expert Committee, the MHRD has formed e-Shodh Sindhu merging three consortia initiatives, namely UGC-INFONET Digital Library Consortium, NLIST and INDEST-AICTE Consortium. The e-Shodh Sindhu will continue to provide current as well as archival access to more than 15,000 core and peer-reviewed journals and a number of bibliographic, citation and factual databases in different disciplines from a large number

of publishers and aggregators to its member institutions including centrally-funded technical institutions, universities and colleges that are covered under 12(B) and 2(f) Sections of the UGC Act. This allows access to be best education resources in the world using digital mode. The INFLIBNET, Gandhinagar, Gujarat is implementing the Scheme.

**6. VIRTUAL LABS** Internet-based experimentation further permits use of resources – knowledge, software, and data available on the web, apart from encouraging skillful experiments being simultaneously performed at points separated in space (and possibly, time).

#### 7. e-YANTRA

 An MHRD initiative under NMEICT Programme, named "e-Yantra" is implemented to incorporate Robotics into engineering education with the objective of engaging students through exciting hands-on application of mathematics, computer science, and engineering principles.

#### 8. CAMPUS CONNECTIVITY

 Establishment of GBPS Connectivity to universities and 20 512
 Kbps broadband connectivity to colleges have been provisioned under NMEICT.

#### 9. E-KALPA

For creating Digital-Learning Environment for Design in India.

## 10. THE FREE AND OPEN SOURCE SOFTWARE FOR EDUCATION (FOSSEE)

Promotes use of open source software in educational institutions (http://fossee.in). It does through instructional material, such as spoken tutorials, documentation, such as textbook companions, awareness programmes, such as conferences, training workshops, and Internships.

#### 11. e-VIDWAN

 Collects and provides academic and research profiles of scientists, faculty and research scientists working in leading academic and R&D organizations in India and abroad;

#### 12. CENTRAL CLOUD INFRASTRUCTURE

Of the IIT Delhi cloud is hosting e-content and video content of e-Acharya.

### 13. GLOBAL INITIATIVE FOR ACADEMIC NETWORK (GIAN)

 Connects the Indian academia with the international talent pool of scientists and entrepreneurs by inviting them to teach and participate in research in Indian HEIs.

## 14. SCHEME FOR ACADEMIC RESEARCH AND PROMOTION BY COLLABORATION (SPARC)

• Facilitates academic and research collaborations between Indian academia and best institutions in the world.

#### 15. DIGITAL INDIA-e-LEARNING

- The main objective of this virtual classroom initiative is to enable millions of youth outside the university campus to access best quality teachers and teaching courses in an easy paced manner without having to pay large admission/ tuition fees or even qualify through JEE or other entrance examinations.
- MOOCs will allow limited interaction with faculty, take examinations and even earn certificates that may help in getting employment.

#### 16. IMPRINT

The Government of India, in order to promote the culture of innovation in India, particularly in the technology institutions like IITs, NITs and all other HEIs, recently formulated a new and unique scheme called Impacting Research Innovation and Technology (IMPRINT), primarily with the goal of translation of knowledge from research into viable technology (product or process).

## 17. SAKSHAT: A ONE STOP EDUCATION PORTAL

• The educational centent portal, developed by eGyanKosh of IGNOU, was launched by the then President of India Dr. APJ Abdul Kalam on 30 October 2006, to facilitate lifelong learning for students, teachers and those in employment or in pursuit of knowledge free of cost to them.

# 18. ATAL RANKING OF INSTITUTIONS ON INNOVATION ACHIEVEMENTS (ARIIA)

• systematically ranks all major higher educational institutions and universities in India on indicators related to "Innovation and Entrepreneurship Development" amongst students and faculties.

## 19. OSCAR (OPEN SOURCE COURSEWARE ANIMATIONS REPOSITORY)

Provides a repository of web-based interactive animations and simulations that we refer to as learning objects (LOs). These learning objects span topics in science and engineering at the college level, and math and science at the school level.

#### 20. SHODH GANGOTRI

 Under the initiative called "Shodh Gangotri", research scholars / research supervisors in universities are requested to deposit electronic version of approved synopsis submitted by research scholars to the universities for registering themselves for the Ph.D programme.

### 21. SOS TOOLS

Software and simulation (SOS)packages are useful tools for the analysis of systems and solving problems by the students of Science, Social Science, Engineering, Management and related disciplines. Many commercial software packages are available for the above. But many of these software packages are quite costly and require yearly license fee for updates and maintenance. Many open source software are available which can perform similar functions but are not user friendly and do not have proper

documentation. Beside these, adequate manpower to teach students to use these packages are not available. The objective of this project is to develop software tools for analysis of systems and computations, create adequate manpower to teach students to use open source software and to develop simulation tools. The developed software should be user friendly and properly documented. Such packages, tailored to suit the needs of our students will be ported on Sakshat for making freely available to any student, teacher or institution willing to use them.

#### 22. E-PG PATHSHALA

High quality, curriculum-based, interactive e-content in 70 subjects across all disciplines of social sciences, arts, fine arts and humanities, natural & mathematical sciences, linguistics and languages developed by the subject experts working in Indian universities and other R & D institutes across the country.

## 36. ICT and Governance

Governance has been defined to refer to structures and processes that are designed to ensure accountability, transparency, responsiveness, rule of law, stability, equity and inclusiveness, empowerment, and broad-based participation. Governance also represents the norms, values and rules of the game through which public affairs are managed in a manner that is transparent, participatory, inclusive and responsive.

#### **Good Governance**

Good governance has 8 major characteristics.

#### e-Governance

## Through Technology

The guiding principles for reforming Government through technology are:

• Form simplification and field reduction – Forms should be made simple and user friendly and only minimum and necessary information should be collected.

- Online applications and tracking Online applications and tracking of their status should be provided.
- Online repositories Use of online repositories e.g. for certificates, educational degrees, identity documents, etc. should be mandated so that citizens are not required to submit these documents in physical form.
- Integration of services and platforms Integration of services and platforms e.g. Aadhaar platform of Unique Identity Authority of India (UIDAI), payment gateway, Mobile Seva platform, sharing of data through open Application Programming Interfaces (API) and middleware such as National and State Service Delivery Gateways (NSDG/SSDG) should be mandated to facilitate integrated and interoperable service delivery to citizens and businesses.

## **OBJECTIVES/ADVANTAGES OF**

#### **E-GOVERNANCE**

- (i) To build an informed society by providing access to every piece of information of the Government and of public importance.
- ii) To increase Government and Citizen Interaction through a feedback framework, to know people's problems and to find solutions with their active involvement.
- (iii) To encourage democracy participation in the Governing process, through feedback, access to information and citizens participation in decision making.

- (iv) To bring transparency in the governing process by making all the information, decisions, and policies of the Government accessible to people.
- (v) To make the Government accountable through transparency in governance help the Government to be more
- (vi) To reduce the cost of Governance by cutting down expenditure on physical delivery of information and services, particularly stationary,
- (vii) To reduce the reaction time of the Government as redtapism of physical files gets eliminated.
- (viii) To speed up delivery of services as technology (Internet, smart phones) make communication speedier.

#### **EMERGING AREAS FOR**

#### e-GOVERNANCE

Technology for	This refers to broadband and wi-fi	
Education – e-Education	connectivity to Schools, digital literacy	
	program at the national level and leveraging	
	Massive Online Open Courses (MOOCs).	
Technology for Health –	This refers to use of technology for better	
e-Healthcare	healthcare service delivery that includes	
	online medical consultation, online medical	
	records, online medicine supply, pan-India	
	exchange for patient information, etc	
Technology for Farmers	This would facilitate farmers to get real time	
	price information, online ordering of inputs	

	and online cash, loan, and relief payment
	with mobile banking.
Technology for Security	This refers to provisioning off Mobile based
	emergency services and disaster related
	services to citizens on real time basis so that
	they can take precautionary measures well in
	time and minimize loss of lives and
	properties.
Technology for Justice	Interoperable Criminal Justice System shall be
	strengthened by leveraging several related
	applications, i.e. e-Courts, e-Police, e-Jails and
	e-Prosecution.
Technology for Financial	Financial inclusion shall be strengthened
Inclusion	using mobile banking, Micro-ATM program
	and CSCs/ Post Offices
Technology for Cyber	National Cyber Security Co-ordination Centre
Security	would be set up to ensure safe and secure
	cyber-space within the country.

## THE FOUR PILLARS OF

## e-GOVERNANCE

- 1. Government to Citizen (G2C)
- 2. Citizen to Government (C2G)
- 3. Government to Government (G2G)
- 4. Government to Business (G2B)

#### 1. Government to Citizen

- **E-Citizenship:** facilitation of Government Services relating to citizenship of an individual.
- **E-transportation:** services of Government, relating to Transport by Road, Rail, Water or Air.
- **E-Health:** health services of the Government, interconnection of all hospitals.
- **E-Education:** Distant as well as classroom education. E-Help: facilitation of disaster and crisis management using ICT.
- **E-Taxation:** tax due alerts and online payment of taxes. 2. Citizen to Government
- **E-Democracy:** The ICT can help to enable the true democratic process including voting, public opinion, feedback and Government accountability.
- **E-Feedback:** ICT enabled online feedback to the Government, online debates on Government services.

#### 3. Government to Government

**E-Administration** 

**E-Police** 

**E-Courts** 

## 4. Government to Business

**E-Taxation** 

E-Licensing

## **E-Tendering**

## THE NATIONAL e-GOVERNANCE PLAN (NeGP)

The National e-Governance Plan (NeGP) as the enabler of Digital India programme was conceptualized to focus on e-Governance initiatives at the national level its aim was to "Make all Government services accessible to the common man in his locality, through common service delivery outlets, and ensure efficiency, transparency, and reliability of such services at affordable costs to realise the basic needs of the common man". The strategy adopted was centralized planning and decentralized planning. The Government initially approved the National e-Governance Plan (NeGP), comprising of 27 Mission Mode Projects (MMPs) and 8 components, on May 18, 2006. 4 more mission mode projects namely 'Education', 'Health', 'Posts' and 'Public Distribution System' were added to NeGP portfolio in 2011. As part of NeGP, core ICT infrastructure has been created by MeitY. (Ministry of Electronics and Information Technology)

### E-KRANTI: NeGP 2.0

It has the vision and mission of electronic delivery of all services in the best manner possible.

## The Key Principles of e-Kranti

- 1. Transformation and not Translation
- 2. Integrated Services and not Individual Services

- 3. Government Process Reengineering (GPR) to be mandatory in every MMP
- 4. ICT Infrastructure on Demand
- 5. Cloud by Default 6. Mobile First
- 7. Fast Tracking Approvals
- 8. Mandating Standards and Protocols
- 9. Language Localization
- 10. National GIS (Geo-Spatial Information System)
- 11. Security and Electronic Data Preservation

#### **DIGITAL INDIA INITIATIVE**

Enabled by National e-Governance Plan (NeGP) and e-Krantis NeG P 2.0, the Digital India Initiative aims to completely digitise all aspects of governance as well as citizens lives.
